Введение

MATLAB это не только продвинутая среда математических расчетов и моделирования, но и мощный инструмент анализа данных. Для этого за последние несколько лет было добавлено большое количество специальных функций.

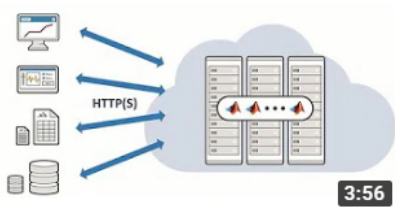

Вот только некоторые из них:

- `table`
- `timetable`
- `datetime`
- `categorical`
- `readtable`
- `smoothdata`
- `rmmissing`
- `fillmissing`
- `isoutlier`
- `retime`
- `groupsummary`
- `discretize`
- `stackedplot`
- `heatmap`
- `geobubble`
- `wordcloud`

Не важно, чем вы занимаетесь - обрабатываете результаты испытаний, телеметрию или анализируете бизнес-данные, результаты продаж, соцсети... С помощью MATLAB вы можете решать свои задачи быстрее и лучше.

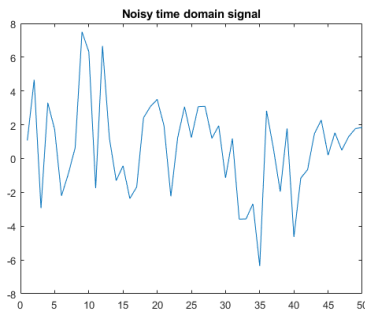

Примеры

MATLAB for Data Analytics

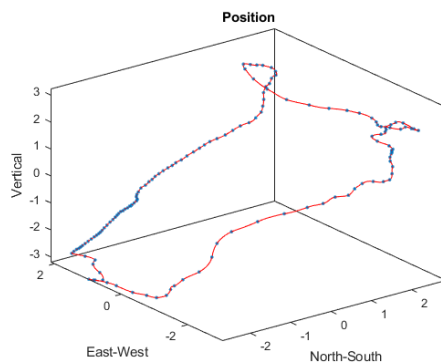

[Смотреть](#)

FFT for Spectral Analysis

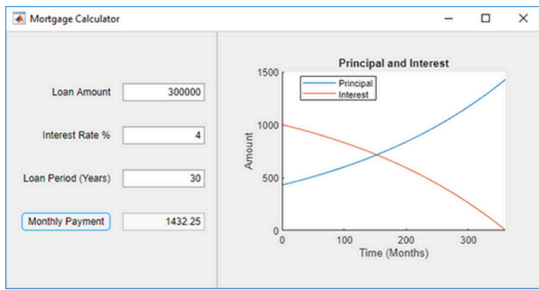

```
web(fullfile(docroot, 'matlab/examples/fft-for-spectral-analysis.html'))
```

Loma Prieta Earthquake Analysis

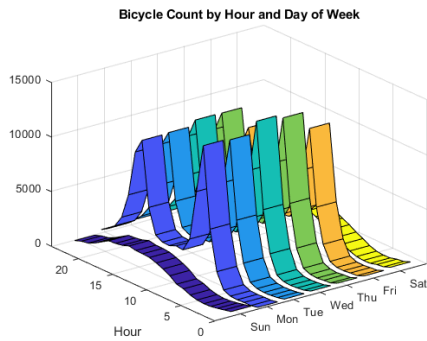

```
web(fullfile(docroot, 'matlab/examples/loma-prieta-earthquake.html'))
```

App that Calculates and Plots Data Based on Numerical Input

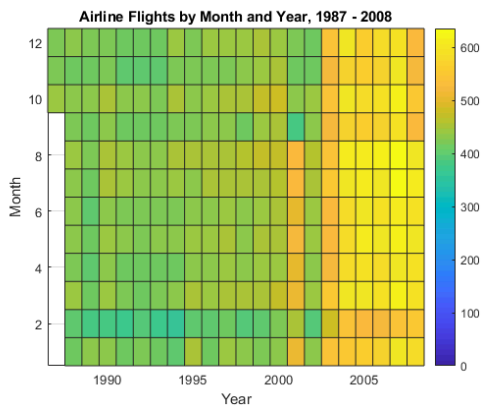

```
web(fullfile(docroot, 'matlab/creating_guis/mortgage-app-or-gui-in-app-designer.html'))
```

Preprocess and Explore Time-stamped Data Using timetable

```
web(fullfile(docroot, 'matlab/examples/preprocess-and-explore-bicycle-count-data-using-timetable.html'))
```

Analyze Big Data in MATLAB Using Tall Arrays

```
web(fullfile(docroot, 'matlab/import_export/analyze-big-data-in-matlab-using-tall-arrays.html'))
```

What is President Trump tweeting about that gets our attention?

The Least Popular with N-Grams = 2 Second Least Popular with N-Grams = 2

Third Least Popular with N-Grams = 1 Fourth Least Popular with N-Grams = 2
